## Snowflake Rubbing Plates

Beautiful snowflake designs are just a few strokes of the marker away with Snowflake Rubbing Plates! Place a piece of paper over the plates and rub a crayon over the plate for an outline of the snowflake. Add details with paint, markers or colored pencils. However, that's not all you can do with rubbing plates. Just as every snowflake is unique from all the others, you can make your craft unique from all others too! Made from 6 designs of actual snowflakes, this is as close to the real thing as you can get!

Proudly made in the U.S.A by Roylco Inc.

- Use different papers and let the students determine which ones works best. You can also experiment with different mediums such as chalk, crayons, markers, etc. (Hint: try holding the chalk or crayon sideways to get good coverage of the plate. Make sure to peel the paper off of the crayon before turning it sideways)

- Use a washable marker to trace the snowflake on the plate. Then take a piece of paper and press the plate down on it to create a wintry stamp. • Use the rubbing plates to make fun frosty fabrics! Take a t-shirt or some quilt pieces and lay it over the plate. Use oil paint sticks to rub over the plate

- Use the rubbing plate for something completely different. Flip the plate over on the back and fill it in with white glue. The glue will dry clear, so be sure to drop food coloring into the glue to give it some color. After the glue has dried, peel it right out of the mold for something more tangible than a paper design and use them wherever you want.

- Try overlapping designs on paper to create your very own unique snowflake design.
