First Color Tiles

For more information, ideas and inspiration and to view a video, please visit www.roylco.com/product/R15676.

Introduce young children to the ancient art of mosaic making with our brightly colored tiles! Each square features an easily-recognizable image that relates to one of six colors.

Use these sturdy tiles in activity stations as patterning and sorting manipulatives! Technique: Separate the die-cut mosaic squares from one another. Using small amounts of liquid glue or a glue stick, adhere the tiles to a sheet of craft paper to create new patterns and pictures. Ideas: Encourage sorting skills! Ask students to sort the tiles by color, theme or any category you can think of!

Develop pre-math skills by asking students to make patterns by color, image or theme with the tiles.

Play Concentration! Place pairs of tiles randomly face down on a table. For an easy game, start with five pairs of matching cards. As students develop their concentration skills, add more pairs of cards. Ask student to take turns flipping any two tiles face up and trying to find matching tiles. Build memory and attention span with this fun game.

Practice letters with students by showing them a tile. Ask students what the image is. If they identify a banana, ask the students what letter the word "banana" starts with.

Exercise fine motor and pre-writing skills by asking students to color in the white border of tiles with their favorite color. Alternatively, ask students to trace around the shape of the different images.
